

➤ User friendly cloud service for educators to manage learning and skills assessment

## KEY FEATURES AND BENEFITS

### Open training material

Create your own or license free of charge practical assignments, tests and work diary templates for school and work based learning in any language. Let the students be independent learners who know the goals and are keen to prove their skills anywhere, anytime!

### Mobile Documentation

Inspire students to produce high quality documentation direct from their learning environment with all smartphones and tablets. You will find easy access to all the assignments, documentation, photo- and video-attachments in one place for evaluation.

### Personal Learning Paths

Publish assignments to students and assessors conveniently. With Workseed you build common and personalized assignment paths following study plans and the skill objectives. You can always monitor students' progress on real time dashboard and react immediately to weak motivation and under performing.

### Assesment and Skill Analytics

Take the official qualification requirements in use automatically in all learning assignments and start tracking students' skills' progress in early stage of education. Build unified paper free assessment practices in all learning environments.

*"Workseed offers our teachers means for coaching approach to work. As a result students promote improved self-confidence and persistence."*

Mikko Saarimaa, Head of Qualifications, North Karelia Education community board

➤ User friendly cloud service for educators to manage learning and skills assessment

## EDUCATOR'S CHALLENGES ON AUTOMOTIVE TECHNOLOGY

### Learner's motivation in practical training

Assuring the learners' skill development in middle of highly advancing car technology is challenge for the educators. Virtual and other digital learning environments are modernizing the automotive education and are attracting learners but they are not replacing practical training. Educators must provide efficient and versatile hands-on training with less contact teaching. Online learning environments currently used are not suitable for practicing on the field and are lacking support for new teaching methods such as coaching and social learning.

### Workplace pedagogy

Workplace training is the key element on car mechanic and car body repair education. Learners are working in real workplaces every year 1-3 months periods targeting to develop the expertise required on the qualification. Very often workplace training is lacking of personal objectives and interaction between the instructor, learner and teacher. There are no ways to automatize the tripartite assessments and feedback collection from the instructor.

## WHY CHOOSE WORKSEED?

### Free training and assignment templates

Teachers can create their own or license free of charge practical car repair and maintenance assignments for the school and workplace learning. The assignment templates simplify vocational skills demonstrations. The assignments provided by Workseed inspire the learners to be more active and to prove their skills individually or by teams anywhere, anytime and with any mobile device!

### One-click assessment process

You can pick the assessor and the skill objectives (based on the qualification or certificate) for every assignment. Workseed makes sure the learners' assignment reports are delivered automatically to all parties for assessing in time. Workplace instructors' participating on the learners' skill assessment has never been this easy - only one email and click needed.

*"Workseed has given us the opportunity to allow our students individual advancement in their studies. This is possible through flexible practical training in our own facilities as well as those of on-the-job-training partners. Workseed is the tool we need to assess individual learning of the students in cooperation with the company representatives and students while reducing laborious paper work at the same time."*
